Dear [INSERT COMPANY NAME],

With the utmost eagerness, I want to express my interest & passion for the <ROLE NAME> position. As a **receptive & adaptive technologically** driven employee, I know my versatile skills and qualifications will make me an asset to the team.

As you will find on my resume, I have had a variety of experiences with many different roles in **Technology,** learning different aspects from each, from my time at **Frontline Technical Support** to my time as a **Technical Ranger**. I am looking to make the next step in my career by leveraging my **knowledge in technology** to further my ability to problem solve and troubleshoot.

As a prospective employee, I can bring the following qualities to the team:

Knowledge of Software Development: One thing that I am very familiar with is the processes it takes in order to develop software. Coding is not the only thing you do in Software Development. You need to gather requirements requested in the design phase in order to get the best suited software for the end user. The process does not truthfully ever end and you will always find a way to optimize the process. Some examples of this would be optimizing through dynamic coding or changing a requirement to be better suited after feedback.

Knowledge of Coding Languages: Java is the coding language that I am most familiar with. However, after taking the Object Oriented course which covered a plethora of information such as searching and sorting algorithms and types of programming languages, I developed the ability to pick up coding languages rather quickly. This was showcased in my Intro to Programming Languages Course where I learned C, C++, Lisp and Prolog.

While my resume provides a quick summary of my experiences, I hope to have the opportunity to share how I can bring value to your company's needs.

Sincerely,

Timothy Kransberger
